Coding Challenge

Thank you for taking the time to showcase your technical expertise. This challenge shouldn't take you more than couple of hours.

We suggest you use your normal development practices rather than focusing on complexity, focus on the skill sets that you want to showcase.

When writing your code, please be mindful of the following:

- Your code should be understandable and maintainable by other developers.
- Your code should be robust and should handle error situations.
- Your code should be bug free, compile and work.

Instructions

The code test will be held on Microsoft Teams and will include members of the SWM Development team. During the test we may ask questions about your approach or ask you to add in new content, but we are also there to answer any questions you may have.

Prior to the code test please setup a project in your preferred development environment so you can focus on completing the task. Our team focuses on React; however, you are welcome to use your preferred JavaScript framework and bootstrapping tool like Create React App. Please choose the setup you are most familiar with to show off your skills. Please note that for CSS you are welcome to use CSS-in-JS libraries, or CSS pre-processors/post-processors however using frameworks like Bootstrap is not permitted.

Your task will be to take the provided JSON and render a news article page using your preferred setup. Assets, a simple design and the JSON have been provided.

If you have any questions, or require clarification please reach out to Inaie Ignacio at inaie.ignacio@wanews.com.au
